

ACRODUNK uses Springfree™ Trampoline - the best in quality and safety!!

"As soon as we saw the Springfree Trampoline, we had to have it for our performance in America's Got Talent. Not only does it look good, but it performs great and is the perfect addition to the ACRODUNK performance."

- ACRODUNK

Springfree™ Trampoline is the World's Safest Trampoline. After 14 years of injury prevention research, it is a smart, safety-conscious design from a team of world class engineers.

Springfree™ Trampolines are designed for jumpers of all ages. Here are some of the Springfree differences:

100% Spring-free

Springfree™ Trampolines are truly 100% free of springs. There are flexible fiberglass rods that lie beneath the jumping surface out of harm's way.

Hidden Frame

Springfree™ Trampolines have a hidden frame that sits well beneath the jumping surface so you won't ever hit the frame.

SoftEdge™

The SoftEdge™ technology maximizes safety around the trampoline edge and is over 30 times more shock absorbent than frame pads and is guaranteed to last for longer.

FlexiNet™ Safety Net Enclosure

The FlexiNet™ safety enclosure is surrounded by flexible supports that cushions jumpers and prevents falls. Unlike other trampoline manufacturers and retailers who consider the safety enclosure as an accessory, Springfree sells every trampoline with the Safety Enclosure and truly values safety as the #1 priority.

There are currently six models of the Springfree™ Trampoline available in North America with our innovative design for providing children with the ultimate in trampoline safety. For more information on the Springfree™ Trampoline, please visit www.springfreetrampoline.com.
